E-PIT™ TOOL

E-PIT™ (External Pipe Integrity Tool) For Pipeline or Boiler Tubes

**E-PIT™
(External Pipeline
Integrity Tool)**

E-PIT™ Tools are designed to inspect tubes & pipes from the outside surface to detect internal (ID) & external (OD) defects. This is useful for situations where a pipe must be inspected before it is taken out of service.

E-PIT™ can inspect through coatings (e.g. Yellow Jacket™) of up to 0.200” (5mm) thickness.

E-PIT™ Tool Applications:

- **Detection of ID & OD defects in pipelines without need to remove coatings**
- **Detection of ID & OD defects in boiler water wall tubes**
- **Detection and sizing of ID & OD defects with equal sensitivity**
