

I-PIT™ TOOL

I-PIT™ (Internal Pipeline Integrity Tool) For Pipeline Inspection

I-PIT™
(Internal Pipeline Integrity Tool)

I-PIT™ Tools are designed to inspect pipes from access to inside surface to detect internal (ID) & external (OD) defects. This is useful for situations where a pipe must be inspected before it is put back in service. I-PIT™ can inspect through internal liner and scale of up to 0.200" (5mm) thickness.

- * Inspection speed is 33'/min (10m/min)**
- * Can be pushed with relative ease for up to 330' (100m)**

I-PIT™ Tool Applications:

- Detection of ID & OD defects in pipelines without need to remove liner**
- Detection of ID & OD defects in pipelines upto 100m**
- Detection and sizing of ID & OD defects with equal sensitivity**
